FAQ

-Bitcoin is not backed by anything!

It's backed by the largest energy network on the earth.

-Bitcoin is not controlled by anyone!

The fact that no one controls Bitcoin makes it neutral and prevents a bad actor from corrupting the system.

-Gold is better than Bitcoin, it has 5000 years of history!

Gold is relatively finite, difficult to transport and exchange. Bitcoin is a finite asset of which there will never be more than 21 million.

-Bitcoin is too volatile!

The price of Bitcoin has undergone the same fluctuations as other markets. The value of Bitcoin is more linked to your freedom than to its currency countervalue.

-Governments will ban Bitcoin!

You can't stop Bitcoin with laws. Bitcoin's network will continue to function because it was designed to be that no one could control it, not even governments.

-Bitcoin is the currency of criminals!

Bitcoin is transparent and traceable, every transaction is recorded. The Euro and the Dollar are currencies used in black markets on a daily basis and impossible to trace.

-Bitcoin uses too much energy!

The traditional banking system requires multiples of the energy used by Bitcoin. Think of all the electricity used in every single bank branch in the world.

-Quantum computers!

At that point the stock market and nuclear codes would be compromised before then. Bitcoin can change its format, to protect itself.

-It is not anonymous!

It never was, the wallets are anonymous but the transactions are completely transparent and can be traced back in time to their creation, thus eliminating the need to rely on third parties.
